PROFESSIONAL SUMMARY

Results-oriented AI Workflow Automation Specialist and Co-founder with a track record of architecting and deploying production-grade automation pipelines, AI-powered agents, and data integration systems that eliminate manual effort and accelerate business execution. Combines entrepreneurial technical leadership with hands-on expertise in Python, JavaScript, RESTful API integration, SQL, and LLM orchestration. Adept at translating complex business processes into scalable, maintainable software solutions. Proven collaborator with stakeholders at all levels, documenting architectures and delivering measurable improvements in process efficiency, system reliability, and operational throughput.

TECHNICAL SKILLS

Automation & Orchestration: Python (automation, data processing, API integrations), n8n, Workflow Automation, Business Process Automation, Power Automate (equivalent paradigm), Webhooks, HTTP/REST integrations

AI & LLM Integration: AI Agent Design, LLM Orchestration, Claude API (Anthropic), Gemini (Google AI Pro), Agentic Pipeline Architecture, Copilot-style Chatbot Development, Prompt Engineering

Programming & Frameworks: Python, JavaScript (custom logic & data transformation), Laravel (PHP backend), Flutter (mobile), JSON manipulation, Custom Code Node logic

Databases & Data Engineering: PostgreSQL, MySQL, SQL (relational databases), Structured data extraction, Data pipeline design, JSON/API data transformation

Cloud & Infrastructure: Microsoft Azure (fundamentals), Cloud-based data flows, IAM & access management principles, CI/CD concepts, Solution architecture design

Version Control & Collaboration: GitHub (version control, collaborative project management), Technical documentation, Solution architecture diagramming (draw.io equivalent), Figma (UI/UX prototyping)

API & System Integration: RESTful APIs, POST/GET requests, Webhooks, HTTP Request nodes, Third-party system integrations, Data handoff architecture

EXPERIENCE

Co-Founder & CEO | [SimpleX](#) | 2023 – Present

AI Workflow Automation & Technical Architecture

- **Architected** and deployed end-to-end Python and n8n automation pipelines for business clients, eliminating manual repetitive workflows and reducing client processing time by up to 70%, by designing multi-step conditional logic systems integrating IF/Switch nodes, Split-in-Batches processing, and Merge operations.
- **Engineered** an intelligent AI-powered content generation system, enabling professional-grade autonomous posting at scale, by integrating LLM nodes (Claude API, Gemini) with style-analysis pipelines that learned and replicated specific authoring patterns.
- **Spearheaded** a fully automated lead management and professional outreach pipeline targeting C-suite executives, achieving a 3x increase in qualified engagement rate, by combining Webhooks, structured data extraction, and customized RESTful API integrations with LinkedIn and WhatsApp automation.
- **Developed** reusable JavaScript utility modules for complex JSON data transformation within Code Nodes, reducing workflow debugging time by 50%, by standardizing data mapping and filtering patterns across all client automation projects.
- **Delivered** measurable improvements in touchless execution and planner productivity across all client engagements by partnering directly with business stakeholders to identify digitization opportunities and translate manual processes into scalable technical solutions.

- **Maintained** comprehensive solution architecture documentation, workflow diagrams, and technical runbooks for all automation systems, enabling non-technical operators to manage and troubleshoot production workflows independently.
- **Applied** GitHub version control and collaborative development best practices across all projects, ensuring long-term maintainability, reproducibility, and team-scalable codebases.

TECHNICAL PROJECTS

Digital Seaport Management System | [Graduation Project — Al-Ahgaff University](#) | 2025 – 2026

- **Engineered** a comprehensive backend automation platform using Laravel and PostgreSQL/MySQL, reducing manual port-clearance processing from days to hours, by architecting automated vessel arrival notifications, intelligent manifest extraction and parsing, and multi-step port clearance request processing.
- **Designed** production-grade data pipelines that extracted, validated, structured, and routed operational data between subsystems with zero manual intervention, demonstrating applied cloud-native data flow architecture.
- **Produced** full solution architecture documentation and data model specifications enabling stakeholder handoff and long-term operational maintainability.

Massar Logistics Mobile Application | [Independent Technical Project](#) | 2024 – 2025

- **Built** a Flutter mobile application integrating MapBox APIs for real-time GPS tracking and local transportation logistics, improving delivery routing accuracy by eliminating manual dispatch coordination, by architecting clean data synchronization flows between mobile client and backend systems.
- **Implemented** modern UI/UX standards and seamless API data handoff architecture, prioritizing performance, reliability, and user experience across the full application stack.

Data Security Automation Tool | [Independent Technical Project](#) | 2024

- **Developed** Python-based AES-256 encryption and steganography automation logic to securely format and embed sensitive data structures within image files, demonstrating applied proficiency in cloud security principles, data protection, and access-control-conscious solution design.

EDUCATION

Bachelor of Science in Information Technology | [Al-Ahgaff University, Yemen](#) | *Graduated May 2026*

- **Graduation Project:** Digital Seaport Management System — full-stack backend automation platform using Laravel and SQL (see Technical Projects above).
- **Relevant Coursework:** Software Architecture, Relational Databases, Computer Networks, Systems Analysis & Design, Data Structures & Algorithms.
